MEMORANDUM

DATE: **Tuesday, April 27, 2021**

TO: **Caledonia Utility District**

FROM: **Anthony A. Bunkelman P.E.**
Utility Director

RE: **DeBack Farms Pad F – Scannell Properties LLC – Storm Water Management Plan & Utility Plan Conditional Approval**

BACKGROUND INFORMATION

Todd G. Mueller P.E. of Pinnacle Engineering Group has prepared a Storm Water Management Plan Update Memo and a Site Utility Plan for DeBack Farms Pad F for Scannell Properties LLC. Pad F in DeBack Farms is located on the North side of Adams Road immediately East of Carol Road. More specifically 12574 Adams Road. The project involves the construction of a +- 323,146 square foot distribution center for General Mills.

The Storm Water Management Plan for DeBack Farms was approved in 2016. The DeBack Farms Business Park falls under Stream Protection Storm Water Regulations. Stream Protection Storm Water Regulations are that the 100 yr. post development peak runoff must be reduced to or below the 2 yr. predevelopment peak runoff. The site must also achieve a minimum of 80% Total Suspended Solids removal.

The Storm Water Management Plan Update Memo for Pad F indicates that some of the Original Storm Water Basins will be draining to different storm water ponds than what was approved. This change was mostly due to the change in building orientation from East to West to North to South. The Caledonia Utility District has reviewed the updated HydroCAD model and has determined that the proposed changes will still meet the Village Ordinance for overall discharge to the South and West. Also due to these changes it has been agreed that each building that is proposed going forward on Pad F will require an updated Storm Water Management Plan Memo to determine that the Village Ordinance is still met.

The Storm Water Management Plan Update Memo that was submitted on April 21st shows conformance with the Ordinance and the review letter dated April 22nd indicates that the Storm Water Management Plan is hereby approved for Phase 1.

The Site Utility Plan for Pad F indicates that a Sanitary Sewer Lateral with a sanitary sewer sampling manhole will be installed for the Building. The Sanitary Sewer plans have been reviewed and are hereby approved subject to the submittal of a SEWRPC 208 letter for the private lateral.

The Site Utility Plan for Pad F also indicates that a Watermain will be extended from DeBack Lane to service the new building for General Mills. A portion of the Watermain that is being extended will be dedicated to the Utility as an Asset. This public portion of the watermain is in

the same location as a previously laid out watermain to loop service within the DeBack Farms Business Park. A portion of the watermain being installed is also considered private watermain to service the new building. All of the watermain (both Public and Private) have been reviewed and are hereby approved subject to the submittal of a DNR Watermain Extension approval letter.

The Site Utility Plan for Pad F also includes Private Storm Sewer that will be discharged to the existing Storm Water Basins within the DeBack Farms Business Park. This storm sewer has been appropriately sized and has been conditionally approved subject to some minor changes and additional information being supplied.

As with all of the Utilities there will be Construction Inspection required to ensure that the Utilities are installed according to the Caledonia Utility District Standards. Foth Infrastructure and Environment LLC has been contacted to perform the construction inspection of the public portion of the Watermain, the Sanitary Sewer from the existing Sanitary Sewer manhole to the proposed sampling manhole, and the Storm Sewer runs that directly discharge to the Storm Water Basins. Those Construction Inspection costs will be charged directly to Scannell Properties LLC as part of the development of Pad F.

Included in this packet is the summary of the Storm Water Management Plan, the Onsite Civil Engineering Plans for DeBack Farms Pad F, the April 22, 2021 approval letter for the Storm Water Management Plan, Sanitary Sewer and Watermain, and the April 23, 2021 conditional approval letter for the entire plan set.

The plans as presented are ready for conditional approval subject to the following conditions being satisfied prior to the issuance of a Building Permit.

RECOMMENDATION

Move to conditionally approve the Storm Water Management Plan Update Memo and Site Utility Plan for Scannell Properties LLC – DeBack Farms Pad F at 12574 Adams Road subject to the following:

1. **All comments on the Utility Director's review letter dated April 23, 2021 are addressed, as necessary.**
2. **The Design Engineer determines that the plans approved by the Caledonia Utility District are technically adequate and are stamped by the Design Engineer.**
3. **Submission of the SEWRPC 208 Letter and the DNR Watermain Extension Letter.**
4. **A Storm Water Management Plan Update Memo is provided for each building that is proposed going forward on Pad F to determine that the Village Ordinance is still met.**
5. **Will need to obtain a Land Disturbance Permit from the Engineering Department.**

Subject: DeBack Farms – Pad F Stormwater Memorandum

The following as a short summary detailing the DeBack Farms – Pad F site compliance with the approved overall Stormwater Management Plan for the DeBack Farms Business Park, dated 10/26/2016.

Stormwater Management

The Pad F site has been designed to comply in its entirety with the approved Stormwater Management Plan for the DeBack Farms Business Park, dated 10/26/2016. The master plan for this campus was designed for an impervious (85%) to pervious (15%) ratio to allow for an overall curve number of 94 (refer to page 4 of the approved Stormwater Management Report).

The overall plan for the park has been modified from the construction of one large building in an east-west orientation to multiple building sites, with Pad F in a north-south orientation. In order to adhere to the original overall campus drainage plan, the proposed drainage basins are being designed to meet the original intent and all subsequent buildings will also be required to show compliance with the approved park stormwater plan.

The majority of the site area is planned for Pond 4 with a small portion of the site and roadway draining into Ponds 1 and 5. Accommodations are being made to maintain the drainage patters of the mass graded areas as well. The drainage basin delineation and impervious area exhibits are included as attachments to this memorandum.

There are also four offsite drainage areas flowing onto the proposed site. Offsite 4A, 4B and 4C remain unchanged from the approved report. Basin Offsite 1B which originally flowed exclusively to Pond 5, is now split between Ponds 4 and 5 due to the switch in orientation of the proposed building. These flows are being accounted for and can easily be accommodated into the approved design. The attached drainage basin exhibit shows the approved basin delineation in green along with the proposed basins in various colors.

The following tables are a summary of the proposed site drainage areas in comparison with the approved delineation (values in blue). The drainage area to Pond 1 is comprised only of proposed roadway at this time, so it has been excluded from the summary tables.

EXISTING CONDITIONS SURVEY:

EXISTING CONDITIONS SURVEY PROVIDED BY PINNACLE ENGINEERING GROUP. ALTHOUGH PEG HAS NO REASON TO BELIEVE THE SURVEY IS INACCURATE, PEG MAKES NO WARRANTS THAT EXISTING INFORMATION CONTAINED WITHIN THESE PLANS IS ALL-INCLUSIVE OR ACCURATE. CONTRACTOR SHALL UNDERTAKE NECESSARY EFFORTS TO VERIFY THE EXISTING CONDITIONS PRIOR TO THE START OF MATERIAL PROCUREMENT AND CONSTRUCTION EFFORTS/ACTIVITIES

GRADING NOTES

1. CONTRACTOR SHALL VERIFY ALL GRADES, ENSURE ALL AREAS DRAIN PROPERLY AND REPORT ANY DISCREPANCIES TO PINNACLE ENGINEERING GROUP PRIOR TO THE START OF ANY CONSTRUCTION ACTIVITIES.
2. ALL EXISTING CONTOURS REPRESENT EXISTING SURFACE GRADES UNLESS OTHERWISE NOTED. ALL PROPOSED GRADES SHOWN ARE FINISH SURFACE GRADES UNLESS OTHERWISE NOTED.
3. SPOT ELEVATIONS REPRESENT THE GRADE ALONG THE CURB AND GUTTER FLOWLINE UNLESS OTHERWISE NOTED.
4. ALL EXCAVATIONS AND MATERIAL PLACEMENT SHALL BE COMPLETED TO DESIGN ELEVATIONS AS DEPICTED IN THE PLANS.

   CONTRACTOR SHALL ASSUME SOLE RESPONSIBILITY FOR THE COMPUTATION(S) OF ALL GRADING QUANTITIES. WHILE PEG ATTEMPTS TO PROVIDE A COST EFFECTIVE APPROACH TO BALANCE EARTHWORK, GRADING DESIGN IS BASED ON MANY FACTORS, INCLUDING SAFETY, AESTHETICS, AND COMMON ENGINEERING STANDARD OF CARE, THEREFORE NO GUARANTEE CAN BE MADE FOR A BALANCED SITE.

   THE CONTRACTOR MAY SOLICIT APPROVAL FROM ENGINEER/OWNER TO ADJUST FINAL GRADES FROM DESIGN GRADES TO PROVIDE AN OVERALL SITE BALANCE AS A RESULT OF FIELD CONDITIONS.
5. GRADING ACTIVITIES SHALL BE IN A MANNER TO ALLOW POSITIVE DRAINAGE ACROSS DISTURBED SOILS, WHICH MAY INCLUDE EXCAVATION OF TEMPORARY DITCHES TO PREVENT PONDING, AND IF NECESSARY PUMPING TO ALLEVIATE PONDING. CONTRACTOR SHALL PREVENT SURFACE WATER FROM ENTERING INTO EXCAVATIONS. IN NO WAY SHALL OWNER BE RESPONSIBLE FOR REMEDIATION OF UNSUITABLE SOILS CREATED/ORIGINATED AS A RESULT OF IMPROPER SITE GRADING OR SEQUENCING. CONTRACTOR SHALL SEQUENCE GRADING ACTIVITIES TO LIMIT EXPOSURE OF DISTURBED SOILS DUE TO WEATHER.
6. THE CONTRACTOR IS RESPONSIBLE FOR MEETING MINIMUM COMPACTION STANDARDS. THE CONTRACTOR SHALL NOTIFY ENGINEER/OWNER IF PROPER COMPACTION CANNOT BE OBTAINED. THE PROJECT'S GEOTECHNICAL CONSULTANT SHALL DETERMINE WHICH IN-SITU SOILS ARE TO BE CONSIDERED UNSUITABLE SOILS. THE ENGINEER/OWNER AND GEOTECHNICAL TESTING CONSULTANT WILL DETERMINE IF REMEDIAL MEASURES WILL BE NECESSARY.
7. IN THE EVENT THAT ANY MOISTURE-DENSITY TEST(S) FAIL TO MEET SPECIFICATION REQUIREMENTS, THE CONTRACTOR SHALL PERFORM CORRECTIVE WORK AS NECESSARY TO BRING THE MATERIAL INTO COMPLIANCE AND RETEST THE FAILED AREA AT NO COST TO THE OWNER.
8. WITH THE AUTHORIZATION OF THE ENGINEER/OWNER, MATERIAL THAT IS TOO WET TO PERMIT PROPER COMPACTION MAY BE SPREAD ON FILL AREAS IN AN EFFORT TO DRY. CONTRACTOR SHALL CLEARLY FIELD MARK THE EXTERIOR LIMITS OF SPREAD MATERIAL WITH PAINTED LATH AND SUBMIT A PLAN TO THE ENGINEER/OWNER THAT IDENTIFIES THE LIMITS. UNDER NO CONDITION SHALL THE SPREAD MATERIAL DEPTH EXCEED THE MOST RESTRICTIVE OF THE EFFECTIVE TREATMENT DEPTH OF MACHINERY THAT WILL BE USED TO TURNOVER THE SPREAD MATERIAL, OR THE MAXIMUM COMPACTION LIFT DEPTH.
9. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY ENGINEER/OWNER IF GROUNDWATER IS ENCOUNTERED DURING EXCAVATION.
10. CONTRACTOR IS SOLELY RESPONSIBLE FOR THE DESIGN AND CONSTRUCTION OF ADEQUATE AND SAFE TEMPORARY SHORING, BRACING, RETENTION STRUCTURES, AND EXCAVATIONS.
11. THE SITE SHALL BE COMPLETED TO WITHIN 0.10-FT (+/-) OF THE PROPOSED GRADES AS INDICATED WITHIN THE PLANS PRIOR TO PLACEMENT OF TOPSOIL OR STONE. CONTRACTOR IS ENCOURAGED TO SEQUENCE CONSTRUCTION SUCH THAT THE SITE IS DIVIDED INTO SMALLER AREAS TO ALLOW STABILIZATION OF DISTURBED SOILS IMMEDIATELY UPON COMPLETION OF INDIVIDUAL SMALLER AREAS.
12. CONTRACTOR SHALL CONTACT "DIGGER'S HOTLINE" FOR LOCATIONS OF ALL EXISTING UTILITIES PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES AND SHALL BE RESPONSIBLE FOR PROTECTING SAID UTILITIES FROM ANY DAMAGE DURING CONSTRUCTION.
13. CONTRACTOR SHALL PROTECT INLETS AND ADJACENT PROPERTIES WITH SILT FENCING OR APPROVED EROSION CONTROL METHODS UNTIL CONSTRUCTION IS COMPLETED. CONTRACTOR SHALL PLACE SILT FENCING AT DOWN SLOPE SIDE OF GRADING LIMITS.
14. CONTRACTOR SHALL BE RESPONSIBLE FOR DAMAGE TO ANY EXISTING FACILITIES OR UTILITIES. ANY DAMAGE SHALL BE REPAIRED TO THE OWNER'S SATISFACTION AT THE EXPENSE OF THE CONTRACTOR.
15. WORK WITHIN ANY ROADWAY RIGHT-OF-WAY SHALL BE COORDINATED WITH THE APPROPRIATE MUNICIPAL OFFICIAL PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES. CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS AND FEES. GRADING WITHIN RIGHT-OF-WAY IS SUBJECT TO APPROVAL BY SAID OFFICIALS. RESTORATION OF RIGHT-OF-WAY IS CONSIDERED INCIDENTAL AND SHALL BE INCLUDED IN THE COST OF GRADING. RESTORATION SHALL INCLUDE ALL ITEMS NECESSARY TO RESTORE RIGHT-OF-WAY IN-KIND INCLUDING LANDSCAPING.
16. CONTRACTOR SHALL COMPLY WITH ALL VILLAGE OF CALEDONIA AND RACINE COUNTY CONSTRUCTION STANDARDS/ORDINANCES.
17. LANDSCAPE AND TURF AREAS SHALL HAVE A MINIMUM OF 6-INCH TOPSOIL REPLACEMENT.
18. TOPSOIL BERMING SHALL ACHIEVE 90% STANDARD PROCTOR DENSITY AT 3%(±) OPTIMUM MOISTURE CONTENT.
19. THE EXISTING STORM SEWER AND UNDERDRAIN SYSTEMS SHALL BE FLAGGED SO THAT IT IS NOT DISTURBED DURING CONSTRUCTION.

THE FOLLOWING ARE DESCRIPTIONS OF THE EROSION AND SEDIMENT CONTROL PRACTICES THAT SHALL BE IMPLEMENTED DURING CONSTRUCTION OF THE PROJECT. IN ADDITION, THE CONTRACTOR SHALL DISTURB ONLY AREAS NECESSARY TO COMPLETE THE CONSTRUCTION PROJECT. ALL PRACTICES SHALL BE CONDUCTED IN ACCORDANCE WITH THE WISCONSIN DEPARTMENT OF NATURAL RESOURCES (WDNR) TECHNICAL STANDARDS AND THE NOTES CONTAINED IN THIS EROSION CONTROL PLAN.

2.1 CONSTRUCTION AND EROSION CONTROL SEQUENCING

CONSTRUCTION SEQUENCING WILL BE UTILIZED AS A MEANS OF CONTROLLING EROSION AND LIMITING SEDIMENT TRANSPORT. SEQUENCING AS SET BY OWNER IN GENERAL IN NATURE AND MAY VARY DEPENDING ON WEATHER CONDITIONS AND/OR PHASING OF CONSTRUCTION. THE CONTRACTOR SHALL SUBMIT A DETAILED SITE SEQUENCING PLAN TO OWNER FOR APPROVAL AT LEAST 5 BUSINESS DAYS PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES. CONTRACTOR MAY MODIFY SEQUENCING AFTER REVIEW AND APPROVAL BY OWNER TO COMPLETE CONSTRUCTION ONLY IF EROSION CONTROLS ARE MAINTAINED IN ACCORDANCE WITH THE CONSTRUCTION SITE EROSION AND SEDIMENT CONTROL REQUIREMENTS.

1. INSTALL TEMPORARY CONSTRUCTION ENTRANCES IN LOCATIONS AS EXISTING STORM SEWERS ARE BUILT. LOCATIONS ARE PRESENTED IN SILT FENCING.
2. INSTALL SILT FENCING ALONG THE PERIMETER OF PROPOSED TOPSOIL STOCKPILE LOCATIONS. THE FIRST TOPSOIL DEPOSITED WITHIN THE STOCKPILE LIMITS SHALL BE PLACED TO CREATE TEMPORARY BERMING ALONG THE SILT FENCE TO PREVENT DIRECT STORMWATER RUNOFF AGAINST SILT FENCING. CONTRACTOR SHALL LIMIT LAND DISTURBING ACTIVITIES ASSOCIATED WITH TEMPORARY BERMING TO A MINIMUM.
3. STRIP TOPSOIL WITHIN THE LIMITS OF THE SEDIMENT TRAPS THAT WILL BE USED FOR TEMPORARY SEDIMENT CONTROL. STRIPPED TOPSOIL SHALL BE PLACED TO CONSTRUCT DIVERSION BERMING OR PLACED WITHIN THE STOCKPILE LIMITS.
4. STRIP TOPSOIL ALONG THE REMAINDER OF DIVERSION BERM AND IMMEDIATELY PLACE TOPSOIL TO CREATE THE BERMING. MAST TOPSOIL STRIPPING SHALL NOT OCCUR UNTIL A DOWNSTREAM SEDIMENT CONTROL IS IN PLACE.
5. CONDUCT ROUGH GRADING OPERATIONS AND UTILITY PIPING INSTALLATION. GRAIN TILE SHALL NOT BE INSTALLED UNTIL UPLAND AREAS CONTRIBUTING STORMWATER RUNOFF ARE STABILIZED. DITCH CHECKS SHALL BE INSTALLED WITHIN DRAINAGE DITCHES IMMEDIATELY FOLLOWING CREATION OF DITCHES AND INLET PROTECTION SHALL BE INSTALLED TO PROTECT ANY STORM SEWER ON CULVERTS THAT WILL FUNCTION DURING CONSTRUCTION.
6. FINE GRADE SUBGRADE SOILS WITHIN PAVEMENT AND BUILDING LIMITS. PLACE STONE BASE MATERIAL AS SOON AS POSSIBLE FOLLOWING COMPLETION OF FINE GRADING EFFORTS.
7. FINE GRADE REMAINING DISTURBED AREAS. PLACE SALVAGED TOPSOIL, EROSION BLANKETS/MATTING AND SEED/MULCH AS SOON AS POSSIBLE FOLLOWING COMPLETION OF FINE GRADING EFFORTS.
8. EROSION CONTROLS SHALL NOT BE REMOVED UNTIL SITE IS FULLY STABILIZED. ON VEGETATIVE COVER IS ESTABLISHED, CONTRACTOR IS RESPONSIBLE FOR REMOVAL OF SILT FENCE, TEMPORARY FENCE PROTECTION, DITCH CHECKS AND OTHER TEMPORARY CONTROLS. ANY RESTORATION PRACTICES AS NECESSARY TO THE SATISFACTION OF THE OWNER.

2.2 STABILIZATION PRACTICES

THE DATES WHEN MAJOR GRADING ACTIVITIES OCCUR WITH CONSTRUCTION ACTIVITIES TEMPORARILY OR PERMANENTLY CEASE ON A PORTION OF THE SITE AND WHEN STABILIZATION MEASURES ARE INITIATED SHALL BE RECORDED ON THE STABILIZATION SCHEDULE PRESENTED IN THE CONSTRUCTION DOCUMENTS.

STABILIZATION MEASURES SHALL BE INITIATED AS SOON AS PRACTICABLE IN PORTIONS OF THE SITE WHERE CONSTRUCTION ACTIVITIES HAVE TEMPORARILY OR PERMANENTLY CEASED, AND MORE THAN SEVENTY DAYS SHALL PASS AFTER THE CONSTRUCTION ACTIVITY IN THAT PORTION OF THE SITE HAS PERMANENTLY CEASED UNLESS:

THE INITIATION OF STABILIZATION MEASURES BY THE SEVENTIETH DAY AFTER CONSTRUCTION ACTIVITY TEMPORARILY OR PERMANENTLY CEASED IS PRECLUDED BY SNOW COVER IN THAT AREA. STABILIZATION MEASURE SHALL BE INITIATED AS SOON AS PRACTICABLE.

CONSTRUCTION ACTIVITY WILL RESUME ON A PORTION OF THE SITE WITHIN FOURTEEN (14) DAYS FROM WHEN ACTIVITIES CEASED, BE THE TOTAL TIME PERIOD THAT THE CONSTRUCTION ACTIVITY IS TEMPORARILY CEASED IS LESS THAN FOURTEEN (14) DAYS. IN THAT AREA, STABILIZATION MEASURES DO NOT HAVE TO BE INITIATED ON THAT PORTION OF THE SITE BY THE SEVENTIETH DAY AFTER CONSTRUCTION ACTIVITY HAS TEMPORARILY CEASED. SEE THE SOIL PROTECTION CHART PRESENTED IN THE CONSTRUCTION DOCUMENTS FOR DETAILS OF PERMANENT AND TEMPORARY VEGETATION.

STABILIZATION MEASURES SHALL BE DETERMINED BASED ON SITE CONDITIONS AT THE TIME CONSTRUCTION ACTIVITY HAS CEASED INCLUDING, BUT NOT LIMITED TO WEATHER CONDITIONS AND LENGTH OF TIME MEASURE MUST BE EFFECTIVE. THE FOLLOWING ARE ACCEPTABLE STABILIZATION MEASURES:

PERMANENT SEEDING IN ACCORDANCE WITH APPROVED LANDSCAPING PLAN.

SUCH PRACTICES COULD INCLUDE SILT FENCE, INSPECTION FENCE, CONSTRUCTION ENTRANCE, DITCH CHECK, EROSION CONTROL MATTING, DIVERSION BERM/SWALE, SEDIMENT TRAP, STONE OUTLET PROTECTION, OUTLET PROTECTION, AND TEMPORARY OR PERMANENT SEDIMENT BASIN. THE FOLLOWING STRUCTURAL PRACTICES ARE TO BE UTILIZED DURING THIS PROJECT:

SILT FENCE SHALL BE PLACED DOWN SLOPE OF DISTURBED AREAS AS OF THE CONSTRUCTION SITE, AND AROUND THE PERIMETER OF THE TOPSOIL STOCKPILE. THIS INCLUDES PROTECTION OF EXISTING WETLAND AREAS TO BE MAINTAINED. SILT FENCE MAY ALSO BE USED AS A TEMPORARY CONTROL DEVICE WHERE SEDIMENT TRANSPORT RUNOFF IS OBSERVED.

CONSTRUCTION ENTRANCE SHALL BE INSTALLED TO REDUCE SOIL EROSION FROM VEHICLES TRAVELING FROM THE SITE DURING CONSTRUCTION ACTIVITIES. IF THE CONSTRUCTION ENTRANCE DOES NOT ADEQUATELY REMOVE MUD FROM VEHICLE TIRES, THE TIRES SHALL BE HOSED OFF BEFORE THE VEHICLE ENTERS ANY PAVED ROADWAY. ANY SOIL DEPOSITED ON THE PUBLIC PAVED ROAD WAY SHALL BE REMOVED IMMEDIATELY.

DITCH CHECK (STRAW WATTLES) SHALL BE INSTALLED IN DRAINAGE CHANNELS AS INDICATED.

EROSION CONTROL MATTING SHALL BE PLACED ON AREAS OR EMBANKMENTS HAVING SLOPES GREATER THAN OR EQUAL TO 3H:1V, BEFORE VEGETATION IS ESTABLISHED.

DIVERSION BERM/SWALE SHALL BE CONSTRUCTED TO DIVERT RUNOFF AROUND THE SITE AND TO DIVERT RUNOFF FROM THE DISTURBED AREA TO A SEDIMENT TRAP OR OTHER CONTROL. BERM/SWALES SHALL BE STABILIZED WITH EQUIPMENT TRACKING AND TEMPORARY SEEDING.

SEDIMENT TRAP/BASIN SHALL BE CONSTRUCTED TO COLLECT RUNOFF AND RUNOFF FROM SITE EROSION BERM/SWALES.

GENERAL PLANTING NOTES

1. THE LAYOUT OF ALL PLANTING BEDS AND INDIVIDUAL TREES AND SHRUBS SHALL BE STAKED BY THE CONTRACTOR IN ADVANCE OF INSTALLATION. FLAGGING, STAKES OR PAINT MAY BE USED TO DELINEATE LOCATIONS AS SCALED FROM THE PLANS. AN APPROVED REPRESENTATIVE WILL REVIEW THESE LOCATIONS WITH THE CONTRACTOR AND MAKE MINOR ADJUSTMENTS AS NECESSARY. BED LAYOUT SHALL ALSO INCLUDE PERENNIAL GROUPINGS BY SPECIES.
2. THE CONTRACTOR IS RESPONSIBLE FOR INDEPENDENTLY DETERMINING THE PLANT MATERIAL QUANTITIES REQUIRED BY THE LANDSCAPE PLANS. REPORT ANY DISCREPANCIES TO THE LANDSCAPE ARCHITECT.
3. NO PLANT MATERIAL OR PLANT SIZE SUBSTITUTIONS WILL BE ACCEPTED UNLESS APPROVAL BY THE LANDSCAPE ARCHITECT. ANY CHANGES SHALL BE SUBMITTED TO THE LANDSCAPE ARCHITECT IN WRITING PRIOR TO INSTALLATION.
4. ALL BNB STOCK SHALL BE NURSERY GROWN IN A CLAY LOAM SOIL FOR A MINIMUM OF THREE GROWING SEASONS WITHIN 200 MILES OF PROJECT LOCATION. IN A ZONE COMPATIBLE WITH USDA HARDINESS ZONE 5A. SEED SHALL BE PROVIDED FROM A NURSERY (WITHIN 200 MILES) WITH A SIMILAR PLANT HARDINESS ZONE AS PROJECT LOCATION. EXISTING SOIL SHALL BE AMENDED PER SOIL ANALYSIS REPORT TO ENSURE A PROPER GROWING MEDIUM IS ACHIEVED.
5. ALL PLANT MATERIAL SHALL COMPLY WITH STANDARDS DESCRIBED IN AMERICAN STANDARD OF NURSERY STOCK - Z60.1 ANSI. LANDSCAPE ARCHITECT OR OWNERS AUTHORIZED REPRESENTATIVE RESERVES THE RIGHT TO INSPECT AND POTENTIALLY REJECT ANY PLANT MATERIAL DEEMED TO NOT MEET THE REQUIRED STANDARDS.
6. ALL STOCK SHALL BE FREE OF DISEASES AND HARMFUL INSECTS, DAMAGE, DISORDERS AND DEFORMITIES.
7. TREES SHALL HAVE SINGLE, STRAIGHT TRUNKS AND WELL BALANCED BRANCH SYSTEMS. MUTLI-STEM TREES SHALL HAVE 3-4 STRAIGHT TRUNKS AND WELL BALANCED BRANCH SYSTEMS. HEIGHT-TO-CALIPER RATIOS SHALL BE CONSISTENT WITH THE LATEST EDITION OF ANSI Z60.1.
8. ROOT SYSTEMS SHALL BE LARGE ENOUGH TO ALLOW FOR FULL RECOVERY OF THE TREE, AND SHALL CONFORM TO STANDARDS AS THEY APPEAR IN THE MOST CURRENT REVISION OF THE AMERICAN ASSOCIATION OF NURSERYMEN'S AMERICAN STANDARD OF NURSERY STOCK ANSI Z60.1.
9. BNB TREES SHALL BE DUG WITH A BALL OF SOIL, NOT SOFT BALLED OR POTTED AND SHALL BE FIRM IN THEIR ROOTBALL. ROOT BALL SHALL BE WRAPPED (WITH BIODEGRADABLE MATERIAL). THE TREE ROOT FLARE, OR COLLAR, SHALL BE AT OR WITHIN THE TOP THREE INCHES OF GRADE.
10. ALL SPRING TREES MUST BE FRESHLY DUG IN THE MOST RECENT SPRING.
11. ALL AUTUMN TREES MUST BE FRESHLY DUG IN THE MOST RECENT AUTUMN.
12. TREES SHALL BE ALIVE, HEALTHY AND APPROPRIATELY MOIST, AT TIME OF DELIVERY. TREES SHALL BE SUBJECT TO INSPECTION FOR CONFORMITY TO SPECIFICATION REQUIREMENTS AND APPROVAL BY THE LANDSCAPE ARCHITECT OR OWNERS REPRESENTATIVE. THE LANDSCAPE ARCHITECT OR OWNERS REPRESENTATIVE RESERVES THE RIGHT TO REJECT ANY TREES THAT DO NOT MEET THE SPECIFICATIONS OR THAT HAVE BEEN DAMAGED DURING SHIPMENT. THE LANDSCAPE INSTALLER MUST RECEIVE APPROVAL FROM LANDSCAPE ARCHITECT FOR ANY SUBSTITUTIONS OR ALTERATIONS.
13. ALL PLANT MATERIAL SHALL BE INSTALLED IN ACCORDANCE WITH PLANTING DETAILS.
14. ALL PLANTING BEDS SHALL HAVE A MINIMUM 10" DEPTH OF PREPARED SOIL. WITH APPROVAL, EXISTING SOIL MAY BE UTILIZED PROVIDED THE PROPER SOIL AMENDMENTS ARE TILLED THOROUGHLY INTO THE TOP 10" OF SOIL. REFER TO SOIL PLACEMENT NOTES.
15. WHILE PLANTING TREES AND SHRUBS, BACKFILL $\frac{2}{3}$ OF PLANTING HOLE AND WATER TREE THOROUGHLY BEFORE INSTALLING THE REMAINDER OF SOIL MIXTURE. AFTER ALL SOIL HAS BEEN PLACED INTO THE PLANTING HOLE WATER THOROUGHLY AGAIN.
16. THE CONTRACTOR MUST LABEL ALL TREES WITH THE COMMON AND BOTANICAL NAMES PRIOR TO FINAL INSPECTION.
17. OAK TREES SHALL BE TREATED FOR TWO-LINE CHESTNUT BORER BOTH AT THE TIME OF INSTALLATION AND DURING THE SECOND GROWING SEASON.
18. ALL PLANTING BEDS SHALL BE MULCHED WITH 3" DEEP SHREDDED HARDWOOD MULCH. AND ALL TREES PLANTED IN TURF AREAS SHALL RECEIVE A 3" DEEP SHREDDED HARDWOOD MULCHED RING AS SHOWN IN PLANTING DETAILS.
19. ALL PLANTING BEDS AND TREE RINGS SHALL HAVE A 4" DEEP TRENCHED BED EDGE CREATED BY EITHER A FLAT LANDSCAPE SPADE OR MECHANICAL EDGER. BED EDGES ARE TO BE CUT CLEAN AND SMOOTH AS SHOWN ON LANDSCAPE PLANS WITH A CLEAN DEFINITION BETWEEN TURF AND PLANTING AREAS.
20. ALL TURF SEED AREAS SHALL RECEIVE A MINIMUM OF 6" DEPTH OF TOPSOIL. WITH APPROVAL, EXISTING SOIL MAY BE UTILIZED PROVIDED THE PROPER SOIL AMENDMENTS ARE TILLED THOROUGHLY INTO THE TOP 6" OF SOIL AS INDICATED IN THE SOIL PLACEMENT NOTES. REQUIRED AMENDMENTS SHALL BE DETERMINED BASED ON A SOIL ANALYSIS TO BE PERFORMED. ALL TOPSOIL AMENDMENT SHALL BE AGED WEED FREE MANURE OR CLASS 1 ORGANIC MATTER.
21. FOR LAWN SEEDING, APPLY A STARTER FERTILIZER AND SEED UNIFORMLY AT THE RATE RECOMMENDED BY MANUFACTURER, AND PROVIDE A MULCH COVERING THAT IS SUITABLE TO PROMOTE SEED GERMINATION AND TURF ESTABLISHMENT. CONTRACTOR TO PROVIDE FERTILIZER, SEED AND MULCH SPECIFICATIONS TO THE LANDSCAPE ARCHITECT FOR APPROVAL PRIOR TO INSTALLATION. EROSION CONTROL MEASURES ARE TO BE INSTALLED IN THOSE AREAS REQUIRING STABILIZATION (SWALES, SLOPES EXCEEDING 1:3, AND THOSE LOCATIONS INDICATED IN CIVIL DRAWINGS).
22. THE CONTRACTOR TO ENSURE A SMOOTH, UNIFORM QUALITY TURF IS ACHIEVED WITH NO BARE SPOTS LARGER THAN 6" X 6". ANY BARE SPOTS LARGER THAN 6" X6" AT THE END OF ESTABLISHMENT PERIOD SHALL BE RESEEDED AT THE CONTRACTORS EXPENSE TO OBTAIN A DENSE, UNIFORM LAWN.
23. ALL FINISH GRADING AND LAWN AREAS TO BE INSTALLED BY LANDSCAPE CONTRACTOR.
24. ALL DISTURBED AREAS WITHIN THE PROJECT SHALL BE RESTORED TO ORIGINAL OR BETTER CONDITION.
25. ALL DISTURBED AREAS OUTSIDE THE LIMITS OF WORK SHALL BE RESTORED TO ORIGINAL OR BETTER CONDITION AT NO ADDITIONAL COST TO THE OWNER.
26. THE CONTRACTOR SHALL VERIFY ALL EXISTING UTILITIES, INCLUDING ANY IRRIGATION LINES, PRIOR TO DIGGING. CONSULT DIGGERS HOTLINE.
22. TREES SHALL BE INSTALLED NO CLOSER THAN
   - -10 FEET FROM ANY FIRE HYDRANT
   - - 7 FEET FROM STORM SEWER, SANITARY SEWER LATERALS, AND WATER SERVICE
23. THE CONTRACTOR SHALL ENSURE THAT SOIL CONDITIONS AND COMPACTION ARE ADEQUATE TO ALLOW FOR PROPER DRAINAGE AROUND THE CONSTRUCTION SITE. UNDESIRABLE CONDITIONS SHALL BE BROUGHT TO THE ATTENTION OF THE LANDSCAPE ARCHITECT PRIOR TO BEGINNING OF WORK. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO ENSURE PROPER SURFACE AND SUBSURFACE DRAINAGE IN ALL AREAS.
24. THE CONTRACTOR IS RESPONSIBLE FOR ALL PERMITS, FEES, AND LICENSES NECESSARY FOR THE INSTALLATION OF THIS PLAN.
25. THE CONTRACTOR IS TO REVIEW ALL SITE ENGINEERING DOCUMENTS PRIOR TO INSTALLATION. ANY CONFLICTS MUST BE REPORTED TO THE LANDSCAPE ARCHITECT. THESE LANDSCAPE DRAWINGS ARE FOR THE INSTALLATION OF PLANT MATERIALS ONLY UNLESS OTHERWISE STATED.
26. THE CONTRACTOR SHALL PROVIDE WATERING AND MAINTENANCE SERVICES FOR A PERIOD OF 60 DAYS TO ENSURE VEGETATIVE ESTABLISHMENT. UPON COMPLETION OF THE PROJECT, CONTRACTOR SHALL SUPPLY THE OWNER IN WRITING WITH ONGOING WATERING AND MAINTENANCE INSTRUCTIONS.

RE: Scannell Properties - Storm Water Management Plan & Site Grading Plan Review

Dear Mr. Artz & Mr. Mueller:

The Caledonia Utility District has performed a review of the Storm Water Management Plan and related Utility Plans for the proposed Scannell Properties Development of Pad F at DeBack Farms Business Park. The Storm Water Management Plan is dated April 21, 2021 and the related Utility Plans are dated April 1, 2021. Below is a summary of the review comments.

- **Storm Water Management Plan**
  After discussion on April 20th, the Storm Water Management Plan Memo entitled "DeBack Farms – Pad F Stormwater Memorandum" dated April 21, 2021 is hereby approved for Phase 1 – General Mills.

Site/Utility Plans

- **Sanitary Sewer**
  The Sanitary Sewer portion of the plans have met the conditions of the prior review and are hereby approved for the Sanitary Sewer subject to the submittal of SEWRPC 208 letter for the private lateral, as necessary.

- **Watermain**
  The Watermain portion of the plans have met the conditions of the prior review and are hereby approved for the Watermain subject to the submittal of DNR Watermain extension approval.

- **Storm Sewer**
  - Field Inlet 43 has been changed from a 60" storm sewer to a 36" storm sewer. Will need to provide a Rim elevation for this inlet.

- **General Comments**
  - The 18" cmp which is proposed under the driveway access in the wetland area is proposed to be below the Normal Water Elevation of Pond 1 and/or the wetlands. This culvert should be RCP and be located at the 10-year water surface elevation of the wetlands (763.72) or above.

- Will need to provide any and all necessary permits for filling/disturbing of wetlands for this proposed project.
- On the Rip Rap Detail at End Sections will need to revise the detail so that the rip rap is not above the flow line of the RCP.
- Will need to provide a detail for the retaining walls for the site. In discussion with Morgan Harbor, it was indicated that the large retaining wall along the Southern portion of the site was going to need to be moved/redesigned so that it could be constructed. Will need to provide/include any updated plans for the retaining wall.
- The Utility District retains the right to additional review comments until the plans are approved.
- Once approved by the Caledonia Utility District, 2 stamped hard copies, 1 stamped electronic (pdf) copy, and the Storm Water Model file are to be submitted for the Storm Water Management Plan. 5 stamped hard copies and 1 stamped electronic (pdf) copy are to be submitted for the Site Grading Plan.

The Village of Caledonia Engineering Department has performed a review of the Site Grading Plan and related plan sheets for the proposed Scannell Development. The following comments have been provided for the issuance of a building permit. All questions in regard to the comments below shall be directed to Tom Lazcano, Public Works Director.

Sheet C-5

1. Will need details and specifications on retaining walls. *Will need to make sure that the Civil Plan retaining wall matches the General Contractors design.*
2. Will need to provide the Finished Yard Grades (FYG's) for the building and the guardhouse.

Sheet C-8

1. Recommend emergency overflow path at ridge opposite the southwest corner of the building by curb be lowered to 775.0 or even 774.0 to give 1' or 2' of free board from the lower loading dock elevations of 776.0. Could be higher if the FFE and FYG's are raised. *The triple inlets are great until one gets plugged. There will need to be a minimum of 1.0' of freeboard in this location.*
2. Side slopes are not to exceed 4:1 slopes. Will need to install swales around the proposed berms to drain internally on to the site. Swales shall have a minimum of 1' to 1.5' deep capacity with centerline slopes of no less than .8%. Give proposed swale centerline spot elevations. May need to shift north berm south to stay out of the wooded area. South berm swales will need to drain to a swale that will need to be installed along the back of the retaining wall. Size of berm may need to shrink. *Add a note: Daylight swale at a minimum 0.8% centerline slope. Add hook contours to reflect this.*
3. At the north and south DID loading ramps, will need to taper down 4' from 780 to 796.0 with side slopes not to exceed 4:1. *Will need to cross hatch or place a note that the slopes are paved.*

Sheet C-20

1. Give concrete apron detail for DeBack Drive approach access (area in ROW). *Add note with Concrete Pavement thickness and base thickness. Recommend 8" concrete over 6" 1-1 4" CABC Dense.*

Sheet C-21

1. Need retaining wall details, plans, and specifications. *Layout could be affected by wall tie backs.*

If there are any questions on this review, please contact Tom Lazcano or myself me to discuss.

Sincerely.

RE: Scannell Properties - Storm Water Management Plan & Site Grading Plan Conditional Approval

Dear Mr. Artz & Mr. Mueller:

The Village of Caledonia and the Caledonia Utility District have agreed to a conditional approval of the DeBack Farms – Pad F Plans dated April 1, 2021 pursuant to our Teams Meeting held on April 23, 2021. The intent of this approval is to allow the owner to begin earth moving operations for the site. The conditions of the approval are listed below.

- Field Inlet 43, Will need to provide a Rim elevation for this inlet.
- The temporary 18" cmp will have the inverts determined by interpolating the contours on the inlet side and then the slope on the pipe shall be flattened out to 0.5%.
- All Retaining Wall information will be supplied to the Village by Morgan/Harbour upon completion of the wall design plans. Retaining wall tie back concern to be alleviated by shifting the retaining wall to the north.
- The Finished Yard Grade on the building shall be the Finished Floor elevation. Morgan/Harbour shall provide positive drainage away from the Guardhouse.
- To alleviate freeboard concerns during possible clogging conditions at the triple inlet South of the building, the grate will be changed to a larger Neenah grate and Inlet Capacity calculations will be provided with the updated plans.
- Upon designing the retaining wall shift, Pinnacle will verify that the required swale on top of the retaining wall flows at minimum 0.8% centerline slope.
- A Note will be added to grading plan stating that loading dock slopes are concrete paved.
- Concrete apron section as recommended will be added to the Detail on C-20.
- The Land Disturbance Permit short form (signed) has been submitted and appropriate fee paid as of this morning. The Land Disturbance Permit long form application has been supplied by the Village, the Village will attach it to the signed short form already submitted when received. Village will use the April 1, 2021 plans to perform the Erosion Control review.
- Pinnacle agrees to implement all the above modifications into a "Construction Set" along with any additional erosion control measures required by the Village which will be supplied to Pinnacle next week.

If there are any questions on this review, please contact Tom Lazcano or myself me to discuss.

Sincerely,

Anthony A. Bunkelman P.E.

RE: **Westview Village Drainage Analysis**

BACKGROUND INFORMATION

Westview Village Residents at the intersection of Clover Lane and Rudolph Drive contacted the Village Administrator in regard to extreme flooding and high-water levels across the road within their subdivision during the August 10th, 2020 rain event. Several of the homes in the immediate area had basement flooding from the high-water levels. In looking at the infrastructure and the drainage area there was concerns that the existing storm sewer may not be adequate. According to the residents the area floods multiple times per year. There also was a concern from the residents that additional development within Mount Pleasant has made the problem worse.

To analyze the drainage area and the storm sewer system there were several questions that needed to be reviewed. What is the capacity of the existing storm sewer system? What is the drainage area contributing to the storm sewer? What is the capacity of the Highway 38 culverts? What is the required pipe size and configuration necessary to eliminate the flooding that has historically taken place?

We had a Drainage analysis performed to answer the various questions. What was found was that the upper end of the system could only handle a 5-year storm event and the remainder of the system could handle a 25-year storm event. Design practice has been that the system conveys a 10-year storm event with the 100-year storm event checked for depth of flooding in roadways. The area that is contributing to the storm sewer system is approximately 108 acres in size (18 acres from Mount Pleasant & 39 acres offsite from Caledonia). We also found out that the road culverts under Highway 38 are sized for a 100-year storm event so there is little detention on the South side of Highway 38. As a remedy for the historical flooding issues the existing 24" storm sewer at the intersection of Clover Lane and Rudolph Drive should be upsized to a 36" storm sewer, the storm sewer lowered as necessary to provide consistent slope and the overgrown swale between the homes from Highway 38 be cleaned, as necessary.

RECOMMENDATION

Move to prepare storm sewer plans and swale cleaning plans as necessary to correct the historical flooding issue at Clover Lane & Rudolph Drive.

RE: Village of Caledonia, WI-Westview Village-Drainage Analysis.

Tony,

The following is a summary of the drainage analysis we performed for the existing Westview Village development in the Village of Caledonia. The purpose of the analysis was to answer the following questions:

- What is the capacity of the existing system?
- What is the drainage area that goes to the storm sewer?
- What is the capacity of the pipes under STH 38?
- What is required pipe size/configuration to remove the flooding that has historically taken place at the southwest portion of the development?

Introduction

SewerGEMS, a hydraulic model developed by Bentley Systems, Inc., was used for the analysis. SewerGEMS uses drainage area, land cover, and rainfall to calculate flows through a system during a multitude of storm events. Drainage areas for each intake within the existing system were determined using field surveyed elevations along with Lidar topography and aerial imagery. Approximately 108 acres of land drain to the existing system. It is important to note that of the 108 acres, approximately 18 acres drains to this development from the Village of Mount Pleasant to the south. Approximately 39 acres drains to the development from offsite areas within the Village of Caledonia. Exhibit 1 contains a drawing showing the drainage areas for the existing system.

Land Cover for each area, used to calculate the rational co-efficient for each drainage area was also determined from aerial imagery. When the individual land cover types are determined for each drainage area, a composite co-efficient is calculated and input into the model. Rainfall for this specific area was taken from the NOAA Atlas 14 Point Procedure Frequency Estimates website. Within this website, rainfall depth and intensity is provided for a specific area. These are provided in a table; the table contains data that is part of an IDF (Intensity Duration Frequency) Curve which is imported into the model. Exhibit 2 contains the table showing the specific rainfall data used.

For the analysis, storm events from the 1-Year storm event through the 100-Year storm event were used. Field survey along with structure measure downs were used to construct the existing condition model skeleton. Drainage Area information and rainfall data were assigned to each intake. The existing conditions model was then run under the different storm events. SewerGEMS generates profiles of the drainage system showing the Hydraulic Grade Line.

Existing Conditions

The specific area which has historically flooded during large storm events is located at the southwest portion of the development; specifically where Rudolph Drive turns into Clover Lane. The results of the existing condition modeling indicate that the overall capacity of the existing system located at the southwest end of the development is the 5-Year storm event; the capacity of the remainder of the system is the 25-Year storm event. The runoff from the approximately 18 acres that drains to this development, is conveyed via an existing 36" RCP underneath STH 38. The runoff contributing to the development from offsite areas of Caledonia are conveyed via 24" pipes underneath Newman Road. The capacity of the 36" pipe from Mount Pleasant is the 100-Year storm event; the capacity of the 24" pipes is approximately a 25-Year event. Exhibit 3 contains profiles within the existing conditions model and the model schematic.

Proposed Conditions

We created a proposed conditions model to determine what revisions to the existing drainage system at the southwest corner of the development would be required to alleviate the historic flooding. After reviewing several alternatives, we determined that the alternative that would alleviate flooding at this location is an upsize and relay of the existing storm sewer system which collects runoff from the 36" sewer underneath STH 38. The modeling has shown that this 24-inch storm sewer cannot convey runoff from the 36-inch storm sewer and creates a surcharged condition. There is also an existing 8-inch storm lateral that connects an existing area drain (Inlet 10052) to the 24-inch sewer. The area drain grate and 8-inch sewer have minimal capacity and contribute to the flooding. Details of the proposed conditions solution are:

Solution

- Removal of existing Inlet 10052 and associated 8-inch storm lateral that ties into the existing 24-inch storm sewer. The runoff that currently drains to Inlet 10052 will drain to Inlet 10070 under proposed conditions. Exhibit 4 contains the schematic for the proposed conditions model as well as the proposed conditions profiles.
- Upsizing of the existing storm sewer from MH 10391 to the outlet from a 24-inch storm sewer to a 36-inch storm sewer.
- Dropping the intake of the proposed sewer one foot when compared to existing conditions; allowing for adequate cover over the storm sewer. The proposed 36-inch storm sewer will be constructed at a consistent slope from the intake to MH 10391. Please see Exhibit 6.
- Remove vegetative overgrowth and debris from the existing ditch containing runoff entering the development from the southwest.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

MEMORANDUM

DATE: Wednesday, April 28, 2021

TO: Caledonia Utility District

FROM: Anthony A. Bunkelman P.E. Utility Director

RE: EPA Risk & Resilience Assessment & Emergency Response Plan Approval

BACKGROUND INFORMATION

On October 23, 2018 the Federal Government signed the America's Water Infrastructure Act. This act requires that all community drinking water systems that serve more than 3,300 people to develop or update risk assessments and emergency response plans. Due to the size of the Caledonia Water Utility, the Utility District must prepare and submit a Risk and Resilience Assessment of its system. Once the Risk and Resilience Assessment is certified by the EPA, an Emergency Response Plan is required to be prepared and certified within 6 months. The Caledonia Utility District has until June 30, 2021 to have a Risk and Resilience Assessment certified and until December 31, 2021 to have the Emergency Response Plan certified.

The Risk and Resilience Assessment must include the following:

1. the risk to the system from malevolent acts and natural hazards;
2. the resilience of the pipes and constructed conveyances, physical barriers, source water, water collection and intake, pretreatment, treatment, storage, and distribution facilities, electronic, computer, or other automated systems (including the security of such systems) which are utilized by the system;
3. the monitoring practices of the system;
4. the financial infrastructure of the system;
5. the use, storage, or handling of various chemicals by the system; and
6. the operation and maintenance of the system.

The America's Water Infrastructure Act also requires that the Risk and Resilience Assessment be reviewed every 5 years. For the Caledonia Utility District, the assessment will need to be reviewed by June 30, 2026. Emergency Response Plans, if necessary, will also need to be revised every 5 years or by December 31, 2026.

Foth provided the lowest cost Proposal for this work and was awarded the project in June of 2020.

Utility District Staff has met with Foth on a couple occasions to go through the analysis on the Water Utility. The Risk Assessment Summary Report provided within this packet is the results of the review of the 6 points above.

RECOMMENDATION

Move to approve the EPA Risk & Resilience Assessment prepared by Foth Infrastructure & Environment LLC and have it submitted to the EPA.

Risk Assessment Summary Report for Caledonia Utility District

Report Date: April 8, 2021

Risk and Resilience Assessment Summary

Purpose

This risk and resilience assessment of Caledonia Utility District was performed on April 8, 2021 using the U.S. Environmental Protection Agency's (EPA) Vulnerability Self-Assessment Tool (VSAT) Web Version 2.0. EPA developed and maintains VSAT Web to serve as an all-hazards risk and resilience assessment tool for water and wastewater utilities of all sizes. Specifically, EPA designed Version 2.0 of VSAT Web to assist community water systems with meeting the requirements for risk and resilience assessments in America's Water Infrastructure Act of 2018 (AWIA).

VSAT Web 2.0 can help water sector owners and operators with identifying the threats that present the highest risks to their facilities and with evaluating the costs and benefits of countermeasures to reduce those risks.

Methodology

VSAT Web 2.0 addresses malevolent acts, natural hazards, and dependency/proximity threats to water sector operations and analyzes the cost-effectiveness of countermeasures to reduce risk. The methodology in VSAT Web 2.0 is based on assessing the risk to a water system asset from a specific threat or hazard (i.e., an Asset-Threat Pair), where risk is defined as follows:

Risk (R) = Threat (T) X Vulnerability (V) X Consequences (C)

- T = Likelihood that the threat will be perpetrated or occur against the asset;
- V = Likelihood that the threat will damage the asset, considering the effectiveness of countermeasures; and
- C = Economic (cost to the utility and region) and public health (injuries and deaths) impacts resulting from damage to the asset.

A monetary value of statistical illness and value of statistical life are assigned to injuries and deaths, respectively, so that risk can be determined as a single monetized value.

AWIA requires community water systems to assess the risks to and resilience of specified assets from both malevolent acts and natural hazards. Accordingly, VSAT Web 2.0 begins with a characterization of water system resilience using the Utility Resilience Index, as described below. The analyst then conducts a qualitative assessment of risks from malevolent acts and natural hazards to all the assets required in AWIA. These steps can ensure that the assessment may be certified as compliant with AWIA.

Following these steps, the analyst determines which assets and threats will undergo a quantitative risk assessment, involving estimates of threat, vulnerability, and consequences. The quantitative risk assessment may include a broad spectrum of assets encompassing the entire water system, or be limited to those assets at highest risk. For threat selection, VSAT Web 2.0 includes all the malevolent acts, natural hazards, and dependency/proximity threats listed in the AWWA J100-10 Standard, along with source water (accidental and intentional) and finished water (accidental) contamination. Analysts may also designate a custom threat.

After completing a quantitative risk assessment under the current (baseline) conditions for the water system, the analyst may choose to conduct an optional assessment of additional (potential) countermeasures (an improvement analysis). VSAT Web 2.0 provides the analyst with a suite of countermeasures from which to select, or the analyst may designate a custom countermeasure. This analysis results in a profile of existing risk and a benefit/cost analysis of potential countermeasures to reduce risk.

Utility Resilience Index

The Utility Resiliency Index (URI) is a risk management tool that can assess a utility's capability to respond to and recover from an incident that impacts critical operations.[1] The URI is a valuable complement to the risk assessment performed in VSAT Web 2.0. A utility can use the URI together with the risk assessments results when developing an overall risk management plan.

The URI uses 12 indicators to calculate the index. Responses to the indicators are assigned values and weights, which are aggregated to provide a characterization of a utility's resilience on a scale from 0% to 100%. A low URI score indicates a low capability of the utility to respond to and recover from an incident, while a high URI score indicates a greater capability to do so. If multiple statements under one indicator apply to the utility, select the statement at the highest resilience level. Statements are arranged from lowest to highest resilience level under each indicator.

The URI for Caledonia Utility District is: 48%

1. **Emergency Response Plan (ERP)**
   An ERP provides a tactical level plan for immediate response to incidents of all types. Select the statement below that best describes the utility's ERP.

   An ERP has been developed

2. **National Incident Management System (NIMS) Compliance**
   NIMS establishes a common framework for defining roles and responsibilities to enhance incident response. NIMS applies the Incident Command System (ICS) to provide the support structure for response activities. Select the statement below that best describes the utility's NIMS compliance.

   No ICS/NIMS training completed or NIMS compliance unknown

3. **Mutual Aid and Assistance (MAA)**
   MAA agreements between other utilities and jurisdictions help to provide rapid response to incidents. Participation in such agreements is traditionally at no cost and does not obligate signatories to respond. An example is the Water/Wastewater Agency Response Network (WARN). Select the statement below that best describes the utility's MAA agreements.

   Local-Local (with adjacent city/town)

4. **Emergency Power for Critical Operations (EPCO)**
   EPCO is a minimum benchmark of 72 hours for backup power for critical operations and assets. Select the statement below that best describes the utility's EPCO.

   Greater than or equal to 73 hours of backup power

5. **Minimum Daily Demand/Treatment (MDDT)**
   MDDT is the ability to meet minimum daily demand or treatment when the production or treatment plant is non-functional. For example, a drinking water utility typically has some level of in-system storage that can provide minimum daily flows for a time even though a treatment plant may be non-functional. Select the statement below that best describes the utility's MDDT.

   Up to 24 hours

6. **Critical Parts and Equipment (CPA)**
   CPA is the lead time for repair, replacement, or recovery of operationally critical parts or equipment. Critical parts are defined as components of the system that upon failure may have the potential to impair the ability to produce, distribute, or treat drinking water or wastewater, including both physical and cyber/process control systems. Select the statement below that best describes the utility's CPA.

   Less than 24 hours

7. **Critical Staff Resilience (CSR)**
   CSR is the percentage of response-capable staff who are cross-trained in critical operations and maintenance positions and available as staff backup. This indicator is primarily related to pandemic flu planning. Select the statement below that best describes the utility's CSR.

   Greater than 50 to 75%

8. **Business Continuity Plan (BCP)**
   A BCP provides an overall indicator of a utility's commitment to integrating risk management principles into the management culture that supports their operations. These plans address the potential financial effects of a crisis, as well as the utility's flexibility to adapt human resource policies to meet the changing needs of employees. Select the statement below that best describes the utility's BCP.

   No BCP or unknown

9. **Utility Bond Rating (UBR)**
   UBRs are assigned by Moody's and indicate a utility's ability and willingness to satisfy financial obligations. The rating includes five primary factors related to municipal finance, which include market position, financial position, debt levels, governance, and covenants. Some utilities may not have a bond rating since they do not seek additional investment capital from the market. Select the statement below that best describes the utility's UBR.

   AA

10. **Government Accounting Standards Board (GASB) Assessment**
    A GASB Assessment determines how much infrastructure has been evaluated to provide an indication of the utility's overall commitment to proper asset management. The assessment coverage is calculated as: 100 x total number of critical assets categorized into condition categories divided by the total number of critical assets as determined in the asset characterization step of the J100 standard. Select the statement below that best describes the utility's GASB Assessment.

    61 to 80% assessed

11. **Unemployment***
    Unemployment is a general socioeconomic indicator of a community's economic health. The Bureau of Labor Statistics (BLS) maintains a database of state and local rates (see http://www.bls.gov/lau/tables.htm) which provides a consistent source for determining this indicator. The value for this indicator is based on the unemployment level in the community served by the utility. Select the statement below that best describes the unemployment rate in the service area.

    < 2 - 4% National Average

12. **Median Household Income (MHI)***
    MHI is a socioeconomic indicator of the wealth of the community served by the utility. This indicator provides insight on the fragility of a community to withstand a significant incident that could threaten the financial stability of the utility. The U.S. Census Bureau maintains a database for each state and county (see https://www.census.gov/quickfacts/fact/table/US/PST045218). Select the statement below that best describes the MHI in the service area.

    10% or more above State Median

1 Secondary Feeds to Key Customers
T Total Net Benefit

*Total number of asset/threat pairs to which this potential countermeasure, or countermeasure package, applies.

**Monetized risk reduction attributable to this potential countermeasure, or countermeasure package, based on all asset/threat pairs to which the countermeasure(s) applies

***Net benefit equals the difference between the monetized risk reduction and the annualized cost attributed to the potential countermeasure or countermeasure package
